

Paris as a Model for Urban Design

- Parisian urban design, connecting major points of interest with direct broad avenues
- applied to south end in a 4-dimensional way: view, walkability, history, cognitive connectedness
- instead of direct roads, we have highlighted pedestrian safe corridors, mutually supported by the presence of churches and schools

7 Qualities of Safe Space

- human presence - eyes on the park, streets, walkability
- human scale - park design, sidewalks, 8.5' lamp posts
- human protection - safe corridors, bus shelters
- visibility - arch, low rise housing, lighting
- order - marked paths, avenues
- connections - public spaces
- legibility - 'architecture parlant', signage

Connections Concept
