

6.0 Introduction to Program Development

The six chapters following the present chapter will outline the programs developed by LSC with the assistance of ESLARP students and faculty. The chapters will address the needs and take advantage of the opportunities outlined in the first five chapters of this plan.

All six program areas, each represented by a chapter, has been established through the process of extensive discussion of the data gathered by residents and students at LSC's monthly meetings and the Neighborhood summit. There has been a very large degree of agreement among participating residents on what the important issues that should be treated in the remainder of the plan is. All individual programs have been discussed and revised by participants in LSC's monthly meetings before included in this planning document.

Each of the chapters includes a general introduction to the topic covered and why this is important for residents in Lansdowne. It then lists the individual programs developed in the chapter. Each program is then described with regards to:

- ?? Program description
- ?? Rationale
- ?? Potential Participating Agencies
- ?? Technical Assistance Providers
- ?? Model programs
- ?? Activities
- ?? Required resources
- ?? Funding needs
- ?? Potential funding sources
- ?? Time line

For some programs information has not been available to cover all these categories and one or more might therefore not be included in the description.
